

World Health Organization (WHO)

International

WHO leads global efforts to expand universal health coverage. They direct and coordinate the world's response to health emergencies and promote healthier lives – from pregnancy care through old age. Their Triple Billion targets outline an ambitious plan for the world to achieve good health for all using science-based policies and programmes. For that, the Mental Health Gap Action Programme (mhGAP) guideline for mental, neurological and substance use disorders supports countries to strengthen capacity to deal with the growing burden of mental, neurological and substance use (MNS) conditions and narrow the treatment gap.
