

Working group Development of Primary Care Guidelines (Worel)

Belgium

The Working Group Development of Primary Care Guidelines (WOREL) is a multidisciplinary scientific organization of guideline developers in Belgium, with experts from various primary care disciplines. The objective of WOREL is to develop and revise guidelines for healthcare professionals active in primary care; be the point of contact for projects in the field of developing guidelines for primary care; establish communication with the various guideline developing partners in Belgium; support the dissemination and incorporation of guidelines into various other EBP tools; use a common internationally recognized methodology for guideline development; involve patients and experts in the development of guidelines; follow international trends in the field of guideline development methodologies; set up and implement the 'living guidelines approach' for recommendations that are strongly subject to changing scientific insights; broaden the support base and network for guideline development and collaborate with other organizations in Europe, with a focus on exchanging knowledge and scientific substantiation.
